

Supplementary Figure S8 | Pre-specified rate-fidelity conclusions reproduce on the untouched external cohort

Eligibility expands with tolerance and the codec ordering changes with the scientific contract; no qualification or scoring rule was returned for external evaluation.

A, pooled development and external rate-fidelity frontiers. B, external QSQ eligibility. C, pairwise SZ3-versus-ZFP crossover. D, certification conditional on eligibility.
The 63-system confirmatory cohort is distinct from the 65-system external descriptive/stability set; external rate-fidelity claims use only the pre-specified 63-system confirmatory analysis.
